

Role:	Senior Engineer – Product Development
Location:	Bangalore
About Solus:	Solus is the Cartesian CRM Product which powers hyper-personalized marketing campaigns enabling a Segment of One strategy. It takes all the good that CRM has promised, and puts it on steroids, and it does it by getting the client to be truly Segment of One in the way they deal with their customers. Solus sits in-between the client's data, and marketing automation systems. It forms the best possible action a client can take today, at an individual customer level, and sends out that recommended action with personalization fields to the messaging systems. With response data coming back in, Solus learns and improves its output, all the time.
Key Responsibilities:	<ul style="list-style-type: none"> <li>• Own the design and development of Backend module of Solus.</li> <li>• Conceptualize and design product to make it configurable, and flexible and user-friendly.</li> <li>• Develop, QA the Product and release to consulting team.</li> <li>• Performance Tune the Product</li> <li>• SPOC for Product to consulting team getting customer live and solving production issues.</li> </ul>
